## **Red Hat Enterprise Linux Release 9.2 Manual Pages on 'ostree-gpg-sign.1' command**

**\$ man ostree-gpg-sign.1**

OSTREE GPG-SIGN(1)          ostree gpg-sign          OSTREE GPG-SIGN(1)

### NAME

ostree-gpg-sign - Sign a commit

### SYNOPSIS

ostree gpg-sign [OPTIONS...] {COMMIT} {KEY-ID...}

### DESCRIPTION

Add a new signature to a commit for each specified GPG key. Note that currently, this will append a new signature even if the commit is already signed with a given key.

### OPTIONS

--delete

Delete signatures having any of the GPG KEY-IDs.

--gpg-homedir="HOMEDIR"

GPG Homedir to use when looking for keyrings.
