Red Hat Enterprise Linux Release 9.2 Manual Pages on 'ostree-rev-parse.1' command

\$ man ostree-rev-parse.1

OSTREE REV-PARSE(1) ostree rev-parse OSTREE REV-PARSE(1)

NAME

ostree-rev-parse - Output the target of a rev

SYNOPSIS

ostree rev-parse {REV} {PATH}

OPTIONS

--single, -S

If the repository has exactly one commit, then print it; any other case will result in an error.

DESCRIPTION

Given a REV, outputs the checksum of the latest commit of that revision.

EXAMPLE

\$ ostree rev-parse my-branch

ce19c41036cc45e49b0cecf6b157523c2105c4de1ce30101def1f759daafcc3e
