$ man pam_shells.8

PAM_SHELLS(8)   Linux-PAM Manual   PAM_SHELLS(8)

NAME

   pam_shells - PAM module to check for valid login shell

SYNOPSIS

   pam_shells.so

DESCRIPTION

   pam_shells is a PAM module that only allows access to the system if the

   user's shell is listed in /etc/shells.

   It also checks if /etc/shells is a plain file and not world writable.

OPTIONS

   This module does not recognise any options.

MODULE TYPES PROVIDED

   The auth and account module types are provided.

RETURN VALUES

   PAM_AUTH_ERR

      Access to the system was denied.

PAM_SUCCESS

   The user's login shell was listed as valid shell in /etc/shells.

PAM_SERVICE_ERR

   The module was not able to get the name of the user.

EXAMPLES

   auth required pam_shells.so
