Red Hat Enterprise Linux Release 9.2 Manual Pages on 'plymouth-set-default-theme.1' command

\$ man plymouth-set-default-theme.1

PLYMOUTH-SET-DEFAU(1) User Commands PLYMOUTH-SET-DEFAU(1)

NAME

plymouth-set-default-theme - Set the plymouth theme

SYNOPSIS

plymouth-set-default-theme [OPTION...] [THEME]

DESCRIPTION

When called with a THEME argument, the plymouth-set-default-theme command changes the preferred boot theme and also performs the necessary regeneration of the initial ramdisk (initrd) since plymouth is loaded from the boot loader from the initrd prior to the mounting of the root filesystem.

If plymouth-set-default-theme is invoked with no options or parameters, it shows the currently selected theme by default. This output is used by the helper scripts plymouth-generate-initrd and plymouth-update-initrd to set the proper theme in the initial ramdisk.

OPTIONS

The following options are understood:

-h, --help

Show summary of options.

-l, --list

List available themes.

-r, --reset

Reset to default theme.

-R, --rebuild-initrd

Rebuild initrd (necessary after changing theme).
