**\$ man podman-manifest-annotate.1**

podman-manifest-annotate(1) General Commands Manualpodman-manifest-annotate(1)

### NAME

podman-manifest-annotate - Add or update information about an entry in a manifest list or image index

### SYNOPSIS

podman manifest annotate [options] listnameorindexname imagemanifestdigest

### DESCRIPTION

Adds or updates information about an image included in a manifest list or image index.

### OPTIONS

--annotation=annotation=value

Set an annotation on the entry for the image.

--arch

Override the architecture which the list or index records as a requirement for the image. This is usually automatically retrieved from the image's configuration information, so it is rarely necessary to use this option.

--features

Specify the features list which the list or index records as requirements for the image. This option is rarely used.

--os

Override the OS which the list or index records as a requirement for

the image. This is usually automatically retrieved from the image's configuration information, so it is rarely necessary to use this option.

#### --os-features

Specify the OS features list which the list or index records as requirements for the image. This option is rarely used.

#### --os-version

Specify the OS version which the list or index records as a requirement for the image. This option is rarely used.

#### --variant

Specify the variant which the list or index records for the image. This option is typically used to distinguish between multiple entries which share the same architecture value, but which expect different versions of its instruction set.

#### EXAMPLE

```
podman manifest annotate --arch arm64 --variant v8 mylist:v1.11
sha256:59eec8837a4d942cc19a52b8c09ea75121acc38114a2c68b98983ce9356b8610
