

Red Hat Enterprise Linux Release 9.2 Manual Pages on 'podman-manifest-inspect.1' command

\$ man podman-manifest-inspect.1

podman-manifest-inspect(1) General Commands Manual podman-manifest-inspect(1)

NAME

podman-manifest-inspect - Display a manifest list or image index

SYNOPSIS

podman manifest inspect [options] listnameorindexname

DESCRIPTION

Displays the manifest list or image index stored using the specified image name.

RETURN VALUE

A formatted JSON representation of the manifest list or image index.

OPTIONS

--tls-verify

Require HTTPS and verify certificates when contacting registries (default: true). If explicitly set to true, TLS verification will be used. If set to false, TLS verification will not be used. If not specified, TLS verification will be used unless the target registry is listed as an insecure registry in containers-registries.conf(5)

EXAMPLES

```
podman manifest inspect mylist:v1.11
```
