## ***Red Hat Enterprise Linux Release 9.2 Manual Pages on 'podman-rmi.1' command***

### ***\$ man podman-rmi.1***

podman-rmi(1)            General Commands Manual            podman-rmi(1)

#### NAME

podman-rmi - Removes one or more locally stored images

#### SYNOPSIS

podman rmi [options] image [...]

podman image rm [options] image [...]

#### DESCRIPTION

Removes one or more locally stored images. Passing an argument image deletes it, along with any of its dangling parent images. A dangling image is an image without a tag and without being referenced by another image.

Note: To delete an image from a remote registry, use the `skopeo delete` command. Some registries do not allow users to delete an image via a CLI remotely.

#### OPTIONS

`--all, -a`

Remove all images in the local storage.

`--force, -f`

This option will cause podman to remove all containers that are using the image before removing the image from the system.

`--ignore, -i`

If a specified image does not exist in the local storage, ignore it and do not throw an error.

--no-prune

This options will not remove dangling parents of specified image

Remove an image by its short ID

```
$ podman rmi c0ed59d05ff7
```

Remove an image and its associated containers.

```
$ podman rmi --force imageID
```

Remove multiple images by their shortened IDs.

```
$ podman rmi c4dfb1609ee2 93fd78260bd1 c0ed59d05ff7
```

Remove all images and containers.

```
$ podman rmi -a -f
```

Remove an absent image with and without the --ignore flag.

```
$ podman rmi --ignore nothing
```

```
$ podman rmi nothing
```

```
Error: nothing: image not known
```

#### Exit Status

0 All specified images removed

1 One of the specified images did not exist, and no other failures

2 One of the specified images has child images or is being used by a container

125 The command fails for any other reason
