### Red Hat Enterprise Linux Release 9.2 Manual Pages on 'podman-secret-ls.1' command

#### \$ man podman-secret-ls.1

podman-secret-ls(1)    General Commands Manual    podman-secret-ls(1)

#### NAME

podman-secret-ls - List all available secrets

#### SYNOPSIS

podman secret ls [options]

#### DESCRIPTION

Lists all the secrets that exist. The output can be formatted to a Go template using the --format option.

#### OPTIONS

--filter, -f=filter=value

Filter output based on conditions given. Multiple filters can be given with multiple uses of the --filter option.

Valid filters are listed below:

??

?Filter ? Description                    ?

??

?name ? [Name] Secret name (accepts ?

? ? regex)                                ?

??

?id ? [ID] Full or partial secret ID ?

??

--format=format

Format secret output using Go template.

--noheading, -n

Omit the table headings from the listing.

--quiet, -q

Print secret IDs only.

## EXAMPLES

```
$ podman secret ls
```

```
$ podman secret ls --format "{{.Name}}"
```

```
$ podman secret ls --filter name=confidential
```
