Red Hat Enterprise Linux Release 9.2 Manual Pages on 'podman-version.1' command

\$ man podman-version.1

podman-version(1) General Commands Manual podman-version(1)

NAME

podman-version - Display the Podman version information

SYNOPSIS

podman version [options]

DESCRIPTION

Shows the following information: Remote API Version, Version, Go Version, Git Commit, Build Time, OS, and Architecture.

OPTIONS

--format, -f=format

Change output format to "json" or a Go template.

??

?Placeholder ? Description ?

??

?Client ... ? Version of local podman ?

??

?Server ... ? Version of remote podman ?

??

Each of the above fields branch deeper into further subfields such as .Version, .APIVersion, .GoVersion, and more.

Example

A sample output of the version command:

```
$ podman version
```

Version: 2.0.0

API Version: 1

Go Version: go1.14.2

Git Commit: 4520664f63c3a7f9a80227715359e20069d95542

Built: Tue May 19 10:48:59 2020

OS/Arch: linux/amd64

Filtering out only the version:

```
$ podman version --format '{{.Client.Version}}'
```

```
2.0.0
```

--help, -h

Print usage statement
