## **Red Hat Enterprise Linux Release 9.2 Manual Pages on 'podman-volume-exists.1' command**

### ***\$ man podman-volume-exists.1***

podman-volume-exists(1) General Commands Manual podman-volume-exists(1)

#### NAME

podman-volume-exists - Check if the given volume exists

#### SYNOPSIS

podman volume exists volume

#### DESCRIPTION

podman volume exists checks if a volume exists. Podman will return an exit code of 0 when the volume is found. A 1 will be returned otherwise. An exit code of 125 indicates there was another issue.

#### OPTIONS

--help, -h

Print usage statement

#### EXAMPLE

Check if a volume called myvol exists (the volume does actually exist).

```
$ podman volume exists myvol
```

```
$ echo $?
```

```
0
```

```
$
```

Check if a volume called mysql exists (the volume does not actually exist).

```
$ podman volume exists mysql
```

```
$ echo $?
```
