Red Hat Enterprise Linux Release 9.2 Manual Pages on 'podman-volume-inspect.1' command

$ man podman-volume-inspect.1

podman-volume-inspect(1)   General Commands Manual   podman-volume-inspect(1)

NAME

   podman-volume-inspect - Get detailed information on one or more volumes

SYNOPSIS

   podman volume inspect [options] volume [...]

DESCRIPTION

   Display detailed information on one or more volumes. The output can be

   formatted using the --format flag and a Go template. To get detailed

   information about all the existing volumes, use the --all flag. Vol?

   umes can be queried individually by providing their full name or a

   unique partial name.

OPTIONS

  --all, -a

   Inspect all volumes.

  --format, -f=format

   Format volume output using Go template

  --help

   Print usage statement

EXAMPLES

      $ podman volume inspect myvol

      $ podman volume inspect --all

      $ podman volume inspect --format "{{.Driver}} {{.Scope}}" myvol
