\$ man podman-volume-reload.1

podman-volume-reload(1) General Commands Manual podman-volume-reload(1)

NAME

podman-volume-reload - Reload all volumes from volumes plugins

SYNOPSIS

podman volume reload

DESCRIPTION

podman volume reload checks all configured volume plugins and updates the libpod database with all available volumes. Existing volumes are also removed from the database when they are no longer present in the plugin.

This command it is best effort and cannot guarantee a perfect state be? cause plugins can be modified from the outside at any time.

Note: This command is not supported with podman-remote.

EXAMPLES

```
$ podman volume reload
```

```
Added:
```

```
vol6
```

```
Removed:
```

```
t3
```
