Red Hat Enterprise Linux Release 9.2 Manual Pages on 'rpm-misc.8' command

$ man rpm-misc.8

RPM misc options(8)   System Manager's Manual   RPM misc options(8)

NAME rpm - lesser need options for rpm(8)

OPTIONS

    --predefine='MACRO EXPR'

        Defines MACRO with value EXPR. before loading macro files.

Switching off features

    --color [never|auto|always]

        Use terminal colors for highlighting error and debug message.

        Default is turning colors on for ttys only (auto).

    --nocontexts

        Disable the SELinux plugin if available. This stops the plugin

        from setting SELinux contexts for files and scriptlets.

    --noglob

        Do not glob arguments when installing package files.

    --nocaps

        Don't verify capabilities of files.

    --excludeconfigs, --noconfigs

Do not install configuration files.

--nohdrchk

Don't verify database header(s) when retrieved.

Debugging

-d, --debug

Print debugging information.

--deploops

Print dependency loops as warning.

--fsmdebug

Print debuging information of payload handling code.

--rpmfcdebug

Print debug information about files packaged.

--rpmiodebug

Print debug information about file IO.

--stats

Print runtime statistics of often used functions.

Obsolete Options

-K, --checksig

See and use rpmkeys(8).

--nodocs

Do not install documentation. Use --excludedocs instead.

--promoteepoch

Enable obsolete epoch handling used in rpm 3.x time frame.

--prtpkts

    OBSOLETE! Used to print the packages containing and representing

    the pgp keys for debugging purposes.
