

Red Hat Enterprise Linux Release 9.2 Manual Pages on 'rpm-plugin-selinux.8' command

\$ man rpm-plugin-selinux.8

RPM-SELINUX(8) System Manager's Manual RPM-SELINUX(8)

NAME

rpm-plugin-selinux - SELinux plugin for the RPM Package Manager

Description

The plugin sets SELinux contexts for installed files and executed scriptlets. It needs SELinux to be enabled to work but will work in both enforcing and permissive mode.

Configuration

The plugin can be disabled temporarily by passing `--nocontexts` at the RPM command line or setting the transaction flag `RPMTRANS_FLAG_NOCON?` TEXTS in the API.

See `rpm-plugins(8)` on how to control plugins in general.
