Red Hat Enterprise Linux Release 9.2 Manual Pages on 'runc-kill.8' command

\$ man runc-kill.8

runc-kill(8) System Manager's Manual runc-kill(8)

NAME

runc-kill - send a specified signal to container

SYNOPSIS

runc kill [--all|-a] container-id [signal]

DESCRIPTION

By default, runc kill sends SIGTERM to the container's initial process only.

A different signal can be specified either by its name (with or without the SIG prefix), or its numeric value. Use kill(1) with -l option to list available signals.

OPTIONS

--all|-a

Send the signal to all processes inside the container.

EXAMPLES

The following will send a KILL signal to the init process of the ubuntu01 container:

```
# runc kill ubuntu01 KILL
```

SEE ALSO

runc(1).
