Red Hat Enterprise Linux Release 9.2 Manual Pages on 'runc-pause.8' command

$ man runc-pause.8

runc-pause(8)   System Manager's Manual   runc-pause(8)

NAME

    runc-pause - suspend all processes inside the container

SYNOPSIS

    runc pause container-id

DESCRIPTION

    The pause command suspends all processes in the instance of the con?

    tainer identified by container-id.

    Use runc list to identify instances of containers and their current

    status.

SEE ALSO

    runc-list(8), runc-resume(8), runc(8).
