Red Hat Enterprise Linux Release 9.2 Manual Pages on 'sane-nec.5' command

$ man sane-nec.5

sane-nec(5)   SANE Scanner Access Now Easy   sane-nec(5)

NAME

   sane-nec - SANE backend for NEC scanners

DESCRIPTION

   The sane-nec library implements a SANE (Scanner Access Now Easy) back?

   end that provides access to NEC SCSI scanners. This backend should be

   considered alpha-quality software! In the current state it is known to

   work with PC-IN500/4C scanners. Another MultiReader scanner series is

   not supported. PC-IN 500/4C and MultiReader scanner are only sold in

   Japan (except Multi Reader PetiScan).

   For other scanners, it may or may not work.

   The backend has the following known problems:

      - ColorLineart mode is not supported.

      - Device name is fixed to /dev/scanner

   At present, the following scanners are known to work with this backend.

```
Vendor Product id

------ -----------

NEC    PC-IN500/4C
```

FILES

/etc/sane.d/nec.conf

The backend configuration file.

/usr/lib64/sane/libsane-nec.a

The static library implementing this backend.

/usr/lib64/sane/libsane-nec.so

The shared library implementing this backend (present on systems

that support dynamic loading).

ENVIRONMENT

SANE_DEBUG_NEC

If the library was compiled with debug support enabled, this en?

vironment variable controls the debug level for this backend.

E.g., a value of 128 requests all debug output to be printed.

Smaller levels reduce verbosity.
