Red Hat Enterprise Linux Release 9.2 Manual Pages on 'sane-tamarack.5' command

$ man sane-tamarack.5

sane-tamarack(5)   SANE Scanner Access Now Easy   sane-tamarack(5)

NAME

sane-tamarack - SANE backend for Tamarack flatbed scanners

DESCRIPTION

The sane-tamarack library implements a SANE (Scanner Access Now Easy)

backend that provides access to the following Tamarack flatbed scan?

ners:

Artiscan 6000C

Artiscan 8000C

Artiscan 12000C

DEVICE NAMES

This backend expects device names of the form:

special

Where special is the path-name for the special device that corresponds

to a SCSI scanner. The special device name must be a generic SCSI de?

vice or a symlink to such a device. The program sane-find-scanner(1)

helps to find out the correct device. Under Linux, such a device name

could be /dev/sga or /dev/sge, for example. See sane-scsi(5) for de?
tails.

FILES

/etc/sane.d/tamarack.conf

The backend configuration file (see also description of

SANE_CONFIG_DIR below).

/usr/lib64/sane/libsane-tamarack.a

The static library implementing this backend.

/usr/lib64/sane/libsane-tamarack.so

The shared library implementing this backend (present on systems

that support dynamic loading).

ENVIRONMENT

SANE_CONFIG_DIR

This environment variable specifies the list of directories that

may contain the configuration file. Under UNIX, the directories

are separated by a colon (`:'), under OS/2, they are separated

by a semi-colon (`;'). If this variable is not set, the config?

uration file is searched in two default directories: first, the

current working directory (".") and then in /etc/sane.d. If the

value of the environment variable ends with the directory sepa?

rator character, then the default directories are searched after

the explicitly specified directories. For example, setting

SANE_CONFIG_DIR to "/tmp/config:" would result in directories

tmp/config, ., and /etc/sane.d being searched (in this order).

SANE_DEBUG_TAMARACK

If the library was compiled with debug support enabled, this en?

vironment variable controls the debug level for this backend.

Higher debug levels increase the verbosity of the output.

Example: export SANE_DEBUG_TAMARACK=4
