Red Hat Enterprise Linux Release 9.2 Manual Pages on 'showconsolefont.8' command

$ man showconsolefont.8

SHOWCONSOLEFONT(8)   System Manager's Manual   SHOWCONSOLEFONT(8)

NAME

    showconsolefont - Show the current EGA/VGA console screen font

SYNOPSIS

    showconsolefont [-V | --version] [-v] [-i] [-C console]

DESCRIPTION

    The showconsolefont command outputs the current console font to stdout.

    The option -v prints additional information, while the option -V prints

    the program version number. The option -i doesn't print out the font

    table, just shows ROWSxCOLSxCOUNT and exits. On Linux 2.6.1 and later,

    the option -C allows one to indicate the console involved. Its argument

    is a pathname.
