$ man ssh-sk-helper.8

SSH-SK-HELPER(8)   BSD System Manager's Manual   SSH-SK-HELPER(8)

NAME

   ssh-sk-helper ? OpenSSH helper for FIDO authenticator support

SYNOPSIS

   ssh-sk-helper [-v]

DESCRIPTION

   ssh-sk-helper is used by ssh-agent(1) to access keys provided by a FIDO

   authenticator.

   ssh-sk-helper is not intended to be invoked by the user, but from

   ssh-agent(1).

   A single option is supported:

   -v   Verbose mode. Causes ssh-sk-helper to print debugging messages

           about its progress. This is helpful in debugging problems. Mul?

           tiple -v options increase the verbosity. The maximum is 3.

           Note that ssh-agent(1) will automatically pass the -v flag to

           ssh-sk-helper when it has itself been placed in debug mode.

SEE ALSO

ssh(1), ssh-add(1), ssh-agent(1)

HISTORY

ssh-sk-helper first appeared in OpenBSD 6.7.
