# Red Hat Enterprise Linux Release 9.2 Manual Pages on 'strrchr.3' command

## \$ man strrchr.3

STRCHR(3)

Linux Programmer's Manual

STRCHR(3)

NAME

strchr, strrchr, strchrnul - locate character in string

#### **SYNOPSIS**

#include <string.h>

char \*strchr(const char \*s, int c);

char \*strrchr(const char \*s, int c);

#define \_GNU\_SOURCE /\* See feature\_test\_macros(7) \*/

#include <string.h>

char \*strchrnul(const char \*s, int c);

#### **DESCRIPTION**

The strchr() function returns a pointer to the first occurrence of the character c in the string s.

The strrchr() function returns a pointer to the last occurrence of the character c in the string s.

The strchrnul() function is like strchr() except that if c is not found in s, then it returns a pointer to the null byte at the end of s, rather than NULL.

Here "character" means "byte"; these functions do not work with wide or multibyte characters.

## **RETURN VALUE**

The strchr() and strrchr() functions return a pointer to the matched character or NULL if the character is not found. The terminating null

byte is considered part of the string, so that if c is specified as

'\0', these functions return a pointer to the terminator.

The strchrnul() function returns a pointer to the matched character, or a pointer to the null byte at the end of s (i.e., s+strlen(s)) if the character is not found.

#### **VERSIONS**

strchrnul() first appeared in glibc in version 2.1.1.

#### **ATTRIBUTES**

For an explanation of the terms used in this section, see at? tributes(7).

?Interface ? Attribute ? Value ?

?strchr(), strrchr(), strchrnul() ? Thread safety ? MT-Safe ?

## **CONFORMING TO**

strchr(), strrchr(): POSIX.1-2001, POSIX.1-2008, C89, C99, SVr4, 4.3BSD.

strchrnul() is a GNU extension.
