Red Hat Enterprise Linux Release 9.2 Manual Pages on 'systemd-rfkill.8' command

$ man systemd-rfkill.8

SYSTEMD-RFKILL.SERVICE(8)   systemd-rfkill.service   SYSTEMD-RFKILL.SERVICE(8)

NAME

   systemd-rfkill.service, systemd-rfkill.socket, systemd-rfkill - Load

   and save the RF kill switch state at boot and change

SYNOPSIS

   systemd-rfkill.service

   systemd-rfkill.socket

   /usr/lib/systemd/systemd-rfkill

DESCRIPTION

   systemd-rfkill.service is a service that restores the RF kill switch

   state at early boot and saves it on each change. On disk, the RF kill

   switch state is stored in /var/lib/systemd/rfkill/.

KERNEL COMMAND LINE

   systemd-rfkill understands the following kernel command line parameter:

   systemd.restore_state=

      Takes a boolean argument. Defaults to "1". If "0", does not restore

      the rfkill settings on boot. However, settings will still be stored

      on shutdown.
