## ***Red Hat Enterprise Linux Release 9.2 Manual Pages on 'tload.1' command***

***\$ man tload.1***

TLOAD(1) User Commands TLOAD(1)

### NAME

tload - graphic representation of system load average

### SYNOPSIS

tload [options] [tty]

### DESCRIPTION

tload prints a graph of the current system load average to the specified tty (or the tty of the tload process if none is specified).

### OPTIONS

-s, --scale number

The scale option allows a vertical scale to be specified for the display (in characters between graph ticks); thus, a smaller value represents a larger scale, and vice versa.

-d, --delay seconds

The delay sets the delay between graph updates in seconds.

-h, --help

Display this help text.

-V, --version

Display version information and exit.

### FILES

/proc/loadavg load average information

### SEE ALSO

ps(1), top(1), uptime(1), w(1)

## BUGS

The -d delay option sets the time argument for an alarm(2); if -d 0 is specified, the alarm is set to 0, which will never send the SIGALRM and update the display.

## AUTHORS

Branko Lankester, David Engel [?david@ods.com?](mailto:david@ods.com), and Michael K. Johnson [?johnsonm@redhat.com?](mailto:johnsonm@redhat.com).

## REPORTING BUGS

Please send bug reports to [?procps@freelists.org?](mailto:procps@freelists.org)
