

Red Hat Enterprise Linux Release 9.2 Manual Pages on 'totem-video-thumbnailer.1' command

\$ man totem-video-thumbnailer.1

```
totem-video-thumbnailer(1)      ""      totem-video-thumbnailer(1)
```

NAME

totem-video-thumbnailer - video thumbnailer for the GNOME desktop

SYNOPSIS

```
totem-video-thumbnailer [-j|--jpeg] [-l|--no-limit] [-s size] input
output [backend options]
```

DESCRIPTION

This manual page documents briefly the totem-video-thumbnailer command.

This manual page was written for the Debian Project because the original program does not have a manual page.

totem-video-thumbnailer is used internally by GNOME applications such as nautilus to generate PNG thumbnails of video files. While it is possible to invoke it manually, it is usually done automatically by nautilus.

ARGUMENTS

input The input filename. This can be in any format that totem can play.

output The output filename, output in PNG format.

backend options

Options to be passed to the backend (i.e. gstreamer).

OPTIONS

-j --jpeg

Switch the output format to JPEG. The default is PNG.

-l --no-limit

Don't limit the thumbnailing time to 30 seconds. For debugging purposes.

-s size The size of the thumbnail. Example: "64x64". The default is "128x96".

AUTHOR

totem-video-thumbnailer was written by Bastien Nocera
<hadess@hadess.net>.

This manual page was written by Zack Cerza <zcerza@coe.neu.edu> for the Debian Project (but may be used by others).
