

Red Hat Enterprise Linux Release 9.2 Manual Pages on 'tss2_getappdata.1' command

\$ man tss2_getappdata.1

tss2_getappdata(1) General Commands Manual tss2_getappdata(1)

NAME

tss2_getappdata(1)

SYNOPSIS

tss2_getappdata [OPTIONS]

SEE ALSO

fapi-config(5) to adjust Fapi parameters like the used cryptographic profile and TCTI or directories for the Fapi metadata storages.

fapi-profile(5) to determine the cryptographic algorithms and parameters

for all keys and operations of a specific TPM interaction like the

name hash algorithm, the asymmetric signature algorithm, scheme and parameters

and PCR bank selection.

DESCRIPTION

tss2_getappdata(1) - This command returns the previously stored application data for an object.

OPTIONS

These are the available options:

? -f, --force:

Force overwriting the output file.

? -p, --path=STRING:

Path of the object for which the application data will be loaded.

? -o, --appData=FILENAME or - (for stdout):

Returns a copy of the stored data. Optional parameter.

COMMON OPTIONS

This collection of options are common to all tss2 programs and provide information that many users may expect.

? -h, --help [man|no-man]: Display the tools manpage. By default, it attempts to invoke the manpager for the tool, however, on failure will output a short tool summary. This is the same behavior if the ?man? option argument is specified, however if explicit ?man? is requested, the tool will provide errors from man on stderr. If the ?no-man? option if specified, or the manpager fails, the short options will be output to stdout.

To successfully use the manpages feature requires the manpages to be installed or on MANPATH, See man(1) for more details.

? -v, --version: Display version information for this tool, supported tctis and exit.

EXAMPLE

```
tss2_getappdata --path=HS/SRK/myRSACrypt --appData=appData.file
```

RETURNS

0 on success or 1 on failure.
