Red Hat Enterprise Linux Release 9.2 Manual Pages on 'wcsncpy.3' command

\$ man wcsncpy.3

WCSCSPN(3) Linux Programmer's Manual WCSCSPN(3)

NAME

wcsncpy - search a wide-character string for any of a set of wide character?
acters

SYNOPSIS

```
#include <wchar.h>  
  
size_t wcsncpy(const wchar_t *wcs, const wchar_t *reject);
```

DESCRIPTION

The wcsncpy() function is the wide-character equivalent of the strncpy() function. It determines the length of the longest initial segment of wcs which consists entirely of wide-characters not listed in reject. In other words, it searches for the first occurrence in the wide-character string wcs of any of the characters in the wide-character string reject.

RETURN VALUE

The wcsncpy() function returns the number of wide characters in the longest initial segment of wcs which consists entirely of wide-characters not listed in reject. In other words, it returns the position of the first occurrence in the wide-character string wcs of any of the characters in the wide-character string reject, or wcslen(wcs) if there is none.
