Red Hat Enterprise Linux Release 9.2 Manual Pages on 'wctype.3' command

\$ man wctype.3

WCTYPE(3)

Linux Programmer's Manual

WCTYPE(3)

NAME

wctype - wide-character classification

SYNOPSIS

#include <wctype.h>

wctype_t wctype(const char *name);

DESCRIPTION

The wctype_t type represents a property which a wide character may or may not have. In other words, it represents a class of wide charac? ters. This type's nature is implementation-dependent, but the special value (wctype_t) 0 denotes an invalid property. Nonzero wctype_t val? ues can be passed to the iswctype(3) function to actually test whether a given wide character has the property.

The wctype() function returns a property, given by its name. The set of valid names depends on the LC_CTYPE category of the current locale, but the following names are valid in all locales.

"alnum" - realizes the isalnum(3) classification function

"alpha" - realizes the isalpha(3) classification function

"blank" - realizes the isblank(3) classification function

"cntrl" - realizes the iscntrl(3) classification function

"digit" - realizes the isdigit(3) classification function

"graph" - realizes the isgraph(3) classification function

"lower" - realizes the islower(3) classification function

```
"print" - realizes the isprint(3) classification function
```

"punct" - realizes the ispunct(3) classification function

"space" - realizes the isspace(3) classification function

"upper" - realizes the isupper(3) classification function

"xdigit" - realizes the isxdigit(3) classification function

RETURN VALUE

The wctype() function returns a property descriptor if the name is valid. Otherwise, it returns (wctype_t) 0.

ATTRIBUTES

For an explanation of the terms used in this section, see at? tributes(7).

?Interface ? Attribute ? Value ?

?wctype() ? Thread safety ? MT-Safe locale ?

CONFORMING TO

POSIX.1-2001, POSIX.1-2008, C99.

NOTES

The behavior of wctype() depends on the LC_CTYPE category of the cur? rent locale.
