## ***Red Hat Enterprise Linux Release 9.2 Manual Pages on 'zipnote.1' command***

### ***\$ man zipnote.1***

zipnote(1)            General Commands Manual            zipnote(1)

#### NAME

zipnote - write the comments in zipfile to stdout, edit comments and rename files in zipfile

#### SYNOPSIS

zipnote [-w] [-b path] [-h] [-q] [-v] [-L] zipfile

#### ARGUMENTS

zipfile Zipfile to read comments from or edit.

#### OPTIONS

- w Write comments to a zipfile from stdin (see below).
- b path  
Use path for the temporary zip file.
- h Show a short help.
- q Suppress some informational messages.
- v Show version information.
- L Show software license.

#### DESCRIPTION

zipnote writes the comments in a zipfile to stdout. This is the default mode. A second mode allows updating the comments in a zipfile as well as allows changing the names of the files in the zipfile. These modes are described below.

#### EXAMPLES

To write all comments in a zipfile to stdout use for example

```
zipnote foo.zip > foo.tmp
```

This writes all comments in the zipfile foo.zip to the file foo.tmp in a specific format.

If desired, this file can then be edited to change the comments and then used to update the zipfile.

```
zipnote -w foo.zip < foo.tmp
```

The names of the files in the zipfile can also be changed in this way.

This is done by following lines like

```
"@ name"
```

in the created temporary file (called foo.tmp here) with lines like

```
"@=newname"
```

and then using the -w option as above.

## BUGS

The temporary file format is rather specific and zipnote is rather picky about it. It should be easier to change file names in a script.

Does not yet support large (> 2 GB) or split archives.
