Rocky Enterprise Linux 9.2 Manual Pages on command 'arptables-restore.8'

$ man arptables-restore.8

ARPTABLES-RESTORE(8)   ARPTABLES-RESTORE(8)

NAME

    arptables-restore - Restore ARP Tables (nft-based)

SYNOPSIS

    arptables-restore

DESCRIPTION

    This tool is deprecated in Red Hat Enterprise Linux. It is maintenance

    only and will not receive new features. New setups should use nft(8).

    Existing setups should migrate to nft(8) when possible. See

    ?https://red.ht/nft_your_tables? for details.

    arptables-restore is used to restore ARP Tables from data specified on

    STDIN or via a file as first argument. Use I/O redirection provided by

    your shell to read from a file

arptables-restore

flushes (deletes) all previous contents of the respective ARP
Table.
