\$ man augenrules.8

AUGENRULES(8) System Administration Utilities AUGENRULES(8)

NAME

augenrules - a script that merges component audit rule files

SYNOPSIS

augenrules [--check] [--load]

DESCRIPTION

augenrules is a script that merges all component audit rules files, found in the audit rules directory, /etc/audit/rules.d, placing the merged file in /etc/audit/audit.rules. Component audit rule files, must end in .rules in order to be processed. All other files in /etc/audit/rules.d are ignored.

The files are concatenated in order, based on their natural sort (see -v option of ls(1)) and stripped of empty and comment (#) lines.

The last processed `-D` directive without an option, if present, is always emitted as the first line in the resultant file. Those with an option are replicated in place. The last processed `-b` directive, if present, is always emitted as the second line in the resultant file. The last processed `-f` directive, if present, is always emitted as the third line in the resultant file. The last processed `-e` directive, if present, is always emitted as the last line in the resultant file.

The generated file is only copied to `/etc/audit/audit.rules`, if it differs.

OPTIONS

`--check`

test if rules have changed and need updating without overwriting `audit.rules`.

`--load` load old or newly built rules into the kernel.

FILES

`/etc/audit/rules.d/` `/etc/audit/audit.rules`

SEE ALSO

`audit.rules(7)`, `auditctl(8)`, `auditd(8)`.
