Rocky Enterprise Linux 9.2 Manual Pages on command 'buildah-source-pull.1'

$ man buildah-source-pull.1

buildah-source-pull(1)   General Commands Manual   buildah-source-pull(1)

NAME

    buildah-source-pull - Pull a source image from a registry to a speci?

    fied path

SYNOPSIS

    buildah source pull [options] registry path

DESCRIPTION

    Pull a source image from a registry to a specified path. The pull op?

    eration will fail if the image does not comply with a source-image OCI

    artifact.

    Note that the buildah-source command and all its subcommands are exper?

    imental and may be subject to future changes.

OPTIONS

    --creds creds

    The [username[:password]] to use to authenticate with the registry if

    required. If one or both values are not supplied, a command line

    prompt will appear and the value can be entered. The password is en?

    tered without echo.

--quiet, -q

Suppress the progress output when pulling a source image.

--tls-verify bool-value

Require HTTPS and verification of certificates when talking to con?
tainer registries (defaults to true). TLS verification cannot be used
when talking to an insecure registry.
