#### DESCRIPTION

These functions return the hyperbolic cosine of x, which is defined mathematically as:

$$\cosh(x) = (\exp(x) + \exp(-x)) / 2$$

## RETURN VALUE

On success, these functions return the hyperbolic cosine of  $x$ .

If  $x$  is a NaN, a NaN is returned.

If  $x$  is +0 or -0, 1 is returned.

If  $x$  is positive infinity or negative infinity, positive infinity is returned.

If the result overflows, a range error occurs, and the functions return +HUGE\_VAL, +HUGE\_VALF, or +HUGE\_VALL, respectively.

## ERRORS

See `math_error(7)` for information on how to determine whether an error has occurred when calling these functions.

The following errors can occur:

Range error: result overflow

`errno` is set to `ERANGE`. An overflow floating-point exception (`FE_OVERFLOW`) is raised.

## ATTRIBUTES

## CONFORMING TO

C99, POSIX.1-2001, POSIX.1-2008.

The variant returning double also conforms to SVr4, 4.3BSD.

## BUGS

In glibc version 2.3.4 and earlier, an overflow floating-point (`FE_OVERFLOW`) exception is not raised when an overflow occurs.
