Rocky Enterprise Linux 9.2 Manual Pages on command 'eps2eps.1'

$ man eps2eps.1

PS2PS(1)   Ghostscript Tools   PS2PS(1)

NAME

    ps2ps, eps2eps - Ghostscript PostScript "distiller"

SYNOPSIS

    ps2ps [options] input output.ps

    eps2eps [options] input output.eps

DESCRIPTION

    ps2ps uses gs(1) to convert PostScript(tm) or PDF(tm) file "input" to

    simpler, normalized and (usually) faster PostScript in "output.ps".

    The output is level 2 DSC 3.0 conforming PostScript.

    eps2eps performs the equivalent optimization, creating Encapsulated

    PostScript (EPS) files. NB, despite the name, the input need not be an

    EPS file, PostScript or indeed PDF files are equally acceptable.

    Both accept any general Ghostscript command line options, and options

    specific to the ps2write and eps2write devices.

FILES

    Run "gs -h" to find the location of Ghostscript documentation on your

    system, from which you can get more details.
