NAME

exp2, exp2f, exp2l - base-2 exponential function

SYNOPSIS

```
#include <math.h>
```

```
double exp2(double x);
```

```
float exp2f(float x);
```

```

Link with -lm.

Feature Test Macro Requirements for glibc (see feature_test_macros(7)):

```
exp2(), exp2f(), exp2l():
```

```

```

DESCRIPTION

These functions return the value of 2 raised to the power of x.

RETURN VALUE

On success, these functions return the base-2 exponential value of x.

For various special cases, including the handling of infinity and NaN,

as well as overflows and underflows, see exp(3).

ERRORS

See `math_error(7)` for information on how to determine whether an error has occurred when calling these functions.

For a discussion of the errors that can occur for these functions, see `exp(3)`.
