Rocky Enterprise Linux 9.2 Manual Pages on command 'flatpak-pin.1'

$ man flatpak-pin.1

FLATPAK PIN(1)   flatpak pin   FLATPAK PIN(1)

NAME

   flatpak-pin - Pin runtimes to prevent automatic removal

SYNOPSIS

   flatpak pin [OPTION...] PATTERN...

DESCRIPTION

   Flatpak maintains a list of patterns that define which refs are pinned.

   A pinned ref will never be automatically uninstalled (as are unused

   runtimes periodically). This can be useful if for example you are using

   a runtime for development purposes.

   Runtimes that are explicitly installed, rather than installed as a

   dependency of something else, are automatically pinned.

   The patterns are just a partial ref, with the * character matching

   anything within that part of the ref. Only runtimes can be pinned, not

   apps. Here are some example patterns:

      org.some.Runtime

      org.some.Runtime//unstable

      runtime/org.domain.*

org.some.Runtime/arm

To list the current set of pins, run this command without any patterns.

OPTIONS

The following options are understood:

-h, --help

Show help options and exit.

--remove

Instead of adding the patterns, remove matching patterns.

--user

Pin refs in a per-user installation.

--system

Pin refs in the default system-wide installation.

--installation=NAME

Pin refs in a system-wide installation specified by NAME among

those defined in /etc/flatpak/installations.d/. Using

--installation=default is equivalent to using --system.

-v, --verbose

Print debug information during command processing.

EXAMPLES

$ flatpak pin

$ flatpak pin org.freedesktop.Platform//19.08

$ flatpak pin --remove org.freedesktop.Platform//19.08
