Rocky Enterprise Linux 9.2 Manual Pages on command 'ipptoolfile.5'

$ man ipptoolfile.5

ipptoolfile(5)   Apple Inc.   ipptoolfile(5)

NAME

    ipptoolfile - ipptool file format

DESCRIPTION

    The ipptool(1) program accepts free-form plain text files that describe

    one or more IPP requests. Comments start with the "#" character and

    continue to the end of the line. Each request is enclosed by curly

    braces, for example:

      # This is a comment

      {

      # The name of the test

      NAME "Print PDF File"

      # The request to send

      OPERATION Print-Job

      GROUP operation-attributes-tag

      ATTR charset attributes-charset utf-8

      ATTR language attributes-natural-language en

      ATTR uri printer-uri $uri

```
        ATTR name requesting-user-name $user

        ATTR mimeMediaType document-format application/pdf

        GROUP job-attributes-tag

        ATTR collection media-col {

          # US Letter plain paper from the "main" tray

          MEMBER collection media-size {

            MEMBER integer x-dimension 21590

            MEMBER integer y-dimension 27940

          }

          MEMBER integer media-top-margin 423

          MEMBER integer media-bottom-margin 423

          MEMBER integer media-left-margin 423

          MEMBER integer media-right-margin 423

          MEMBER keyword media-source "main"

          MEMBER keyword media-type "stationery"

        }

        FILE testfile.pdf

        # The response to expect

        STATUS successful-ok

        EXPECT job-id OF-TYPE integer WITH-VALUE >0

        EXPECT job-uri OF-TYPE uri

}

{

        # The name of the test

        NAME "Wait for Job to Complete"

        # The request to send

        OPERATION Get-Job-Attributes

        GROUP operation-attributes-tag

        ATTR charset attributes-charset utf-8

        ATTR language attributes-natural-language en

        ATTR uri printer-uri $uri

        ATTR integer job-id $job-id

        ATTR name requesting-user-name $user
```

```
    # The response to expect

     STATUS successful-ok

     EXPECT job-id OF-TYPE integer WITH-VALUE $job-id

     EXPECT job-uri OF-TYPE uri

     EXPECT job-state OF-TYPE enum WITH-VALUE >5 REPEAT-NO-MATCH

     EXPECT job-originating-user-name OF-TYPE name WITH-VALUE "$user"

    # Show the job state until completed...

     DISPLAY job-state

     DISPLAY job-state-reasons

  }
```

TOP-LEVEL DIRECTIVES

The following directives can be used outside of a test:

{ test }

Defines a test.

DEFINE variable-name value

Defines the named variable to the given value. This is equivalent

to specifying -d variable-name=value on the ipptool(8) command-

line.

DEFINE-DEFAULT variable-name value

Defines the named variable to the given value if it does not al?

ready have a value.

FILE-ID "identifier"

Specifies an identifier string for the current file.

IGNORE-ERRORS yes

IGNORE-ERRORS no

Specifies whether, by default, ipptool(8) will ignore errors and

continue with subsequent tests.

INCLUDE "filename"

INCLUDE <filename>

Includes another test file. The first form includes a file rela?

tive to the current test file, while the second form includes a

file from the ipptool(8) include directory.

INCLUDE-IF-DEFINED name "filename"

INCLUDE-IF-DEFINED name <filename>

>Includes another test file if the named variable is defined. The
>first form includes a file relative to the current test file,
>while the second form includes a file from the ipptool(8) include
>directory.

INCLUDE-IF-NOT-DEFINED name "filename"

INCLUDE-IF-NOT-DEFINED name <filename>

>Includes another test file if the named variable is not defined.
>The first form includes a file relative to the current test file,
>while the second form includes a file from the ipptool(8) include
>directory.

SKIP-IF-DEFINED variable-name

SKIP-IF-NOT-DEFINED variable-name

>Specifies that the remainder of the test file should be skipped
>when the variable is or is not defined.

STOP-AFTER-INCLUDE-ERROR no

STOP-AFTER-INCLUDE-ERROR yes

>Specifies whether tests will be stopped after an error in an in?
>cluded file.

TRANSFER auto

>Specifies that tests will, by default, use "Transfer-Encoding:
>chunked" for requests with attached files and "Content-Length:"
>for requests without attached files.

TRANSFER chunked

>Specifies that tests will, by default, use the HTTP/1.1 "Transfer-
>Encoding: chunked" header. This is the default and is equivalent
>to specifying -c on the ipptool(8) command-line. Support for chun?
>ked requests is required for conformance with all versions of IPP.

TRANSFER length

>Specifies that tests will, by default, use the HTTP/1.0 "Content-
>Length:" header. This is equivalent to specifying -l on the ipp?
>tool(8) command-line. Support for content length requests is re?
>quired for conformance with all versions of IPP.

VERSION 1.0

VERSION 1.1

VERSION 2.0

VERSION 2.1

VERSION 2.2

> Specifies the default IPP version number to use for the tests that
>
> follow.

TEST DIRECTIVES

> The following directives are understood within a test:
>
> ATTR out-of-band-tag attribute-name
>
> ATTR tag attribute-name value(s)
>
> > Adds an attribute to the test request. Out-of-band tags (admin-
> >
> > define, delete-attribute, no-value, not-settable, unknown, unsup?
> >
> > ported) have no value. Values for other tags are delimited by the
> >
> > comma (",") character - escape commas using the "\" character.
> >
> > Common attributes and values are listed in the IANA IPP registry -
> >
> > see references below.
>
> ATTR collection attribute-name { MEMBER tag member-name value(s) ... }

[... ,{ ... }]

> > Adds a collection attribute to the test request. Member at?
> >
> > tributes follow the same syntax as regular attributes and can
> >
> > themselves be nested collections. Multiple collection values can
> >
> > be supplied as needed, separated by commas.
>
> COMPRESSION deflate
>
> COMPRESSION gzip
>
> COMPRESSION none
>
> > Uses the specified compression on the document data following the
> >
> > attributes in a Print-Job or Send-Document request.
>
> DELAY seconds[,repeat-seconds]
>
> > Specifies a delay in seconds before this test will be run. If two
> >
> > values are specified, the second value is used as the delay be?
> >
> > tween repeated tests.
>
> DISPLAY attribute-name

Specifies that value of the named attribute should be output as part of the test report.

EXPECT attribute-name [predicate(s)]

EXPECT ?attribute-name predicate(s)

EXPECT !attribute-name

Specifies that the response must/may/must not include the named attribute. Additional requirements can be added as predicates - see the "EXPECT PREDICATES" section for more information on predi? cates. Attribute names can specify member attributes by separating the attribute and member names with the forward slash, for example "media-col/media-size/x-dimension".

EXPECT-ALL attribute-name [predicate(s)]

EXPECT-ALL ?attribute-name predicate(s)

Specifies that the response must/may include the named attribute and that all occurrences of that attribute must match the given predicates.

FILE filename

Specifies a file to include at the end of the request. This is typically used when sending a test print file.

GROUP tag

Specifies the group tag for subsequent attributes in the request.

IGNORE-ERRORS yes

IGNORE-ERRORS no

Specifies whether ipptool(8) will ignore errors and continue with subsequent tests.

NAME "literal string"

Specifies the human-readable name of the test.

OPERATION operation-code

Specifies the operation to be performed.

PAUSE "message"

Displays the provided message and waits for the user to press a key to continue.

REQUEST-ID number

REQUEST-ID random

>   Specifies the request-id value to use in the request, either an
>
>   integer or the word "random" to use a randomly generated value
>
>   (the default).

RESOURCE path

>   Specifies an alternate resource path that is used for the HTTP
>
>   POST request. The default is the resource from the URI provided to
>
>   the ipptool(8) program.

SKIP-IF-DEFINED variable-name

SKIP-IF-NOT-DEFINED variable-name

>   Specifies that the current test should be skipped when the vari?
>
>   able is or is not defined.

SKIP-PREVIOUS-ERROR yes

SKIP-PREVIOUS-ERROR no

>   Specifies whether ipptool(8) will skip the current test if the
>
>   previous test resulted in an error/failure.

STATUS status-code [predicate]

>   Specifies an expected response status-code value. Additional re?
>
>   quirements can be added as predicates - see the "STATUS PREDI?
>
>   CATES" section for more information on predicates.

TEST-ID "identifier"

>   Specifies an identifier string for the current test.

TRANSFER auto

>   Specifies that this test will use "Transfer-Encoding: chunked" if
>
>   it has an attached file or "Content-Length:" otherwise.

TRANSFER chunked

>   Specifies that this test will use the HTTP/1.1 "Transfer-Encoding:
>
>   chunked" header.

TRANSFER length

>   Specifies that this test will use the HTTP/1.0 "Content-Length:"
>
>   header.

VERSION 1.0

VERSION 1.1

VERSION 2.0

VERSION 2.1

VERSION 2.2

>Specifies the IPP version number to use for this test.

EXPECT PREDICATES

>The following predicates are understood following the EXPECT test di?

>rective:

COUNT number

>Requires the EXPECT attribute to have the specified number of val?

>ues.

DEFINE-MATCH variable-name

>Defines the variable to "1" when the EXPECT condition matches. A

>side-effect of this predicate is that this EXPECT will never fail

>a test.

DEFINE-NO-MATCH variable-name

>Defines the variable to "1" when the EXPECT condition does not

>match. A side-effect of this predicate is that this EXPECT will

>never fail a test.

DEFINE-VALUE variable-name

>Defines the variable to the value of the attribute when the EXPECT

>condition matches. A side-effect of this predicate is that this

>EXPECT will never fail a test.

IF-DEFINED variable-name

>Makes the EXPECT conditions apply only if the specified variable

>is defined.

IF-NOT-DEFINED variable-name

>Makes the EXPECT conditions apply only if the specified variable

>is not defined.

IN-GROUP tag

>Requires the EXPECT attribute to be in the specified group tag.

OF-TYPE tag[|tag,...]

>Requires the EXPECT attribute to use one of the specified value

>tag(s).

REPEAT-LIMIT number

   Specifies the maximum number of times to repeat if the REPEAT-

   MATCH or REPEAT-NO-MATCH predicate is specified. The default value

   is 1000.

REPEAT-MATCH

REPEAT-NO-MATCH

   Specifies that the current test should be repeated when the EXPECT

   condition matches or does not match.

SAME-COUNT-AS attribute-name

   Requires the EXPECT attribute to have the same number of values as

   the specified parallel attribute.

WITH-ALL-HOSTNAMES "literal string"

WITH-ALL-HOSTNAMES "/regular expression/"

   Requires that all URI values contain a matching hostname.

WITH-ALL-RESOURCES "literal string"

WITH-ALL-RESOURCES "/regular expression/"

   Requires that all URI values contain a matching resource (includ?

   ing leading /).

WITH-ALL-SCHEMES "literal string"

WITH-ALL-SCHEMES "/regular expression/"

   Requires that all URI values contain a matching scheme.

WITH-ALL-VALUES "literal string"

   Requires that all values of the EXPECT attribute match the literal

   string. Comparisons are case-sensitive.

WITH-ALL-VALUES <number

WITH-ALL-VALUES =number

WITH-ALL-VALUES >number

WITH-ALL-VALUES number[,...,number]

   Requires that all values of the EXPECT attribute match the num?

   ber(s) or numeric comparison. When comparing rangeOfInteger val?

   ues, the "<" and ">" operators only check the upper bound of the

   range.

WITH-ALL-VALUES "false"

WITH-ALL-VALUES "true"

Requires that all values of the EXPECT attribute match the boolean

value given.

WITH-ALL-VALUES "/regular expression/"

Requires that all values of the EXPECT attribute match the regular

expression, which must conform to the POSIX regular expression

syntax. Comparisons are case-sensitive.

WITH-HOSTNAME "literal string"

WITH-HOSTNAME "/regular expression/"

Requires that at least one URI value contains a matching hostname.

WITH-RESOURCE "literal string"

WITH-RESOURCE "/regular expression/"

Requires that at least one URI value contains a matching resource

(including leading /).

WITH-SCHEME "literal string"

WITH-SCHEME "/regular expression/"

Requires that at least one URI value contains a matching scheme.

WITH-VALUE "literal string"

Requires that at least one value of the EXPECT attribute matches

the literal string. Comparisons are case-sensitive.

WITH-VALUE <number

WITH-VALUE =number

WITH-VALUE >number

WITH-VALUE number[,...,number]

Requires that at least one value of the EXPECT attribute matches

the number(s) or numeric comparison. When comparing rangeOfInteger

values, the "<" and ">" operators only check the upper bound of

the range.

WITH-VALUE "false"

WITH-VALUE "true"

Requires that at least one value of the EXPECT attribute matches

the boolean value given.

WITH-VALUE "/regular expression/"

Requires that at least one value of the EXPECT attribute matches the regular expression, which must conform to the POSIX regular expression syntax. Comparisons are case-sensitive.

WITH-VALUE-FROM attribute-name

Requires that the value(s) of the EXPECT attribute matches the value(s) in the specified attribute. For example, "EXPECT job-sheets WITH-VALUE-FROM job-sheets-supported" requires that the "job-sheets" value is listed as a value of the "job-sheets-sup‐ ported" attribute.

STATUS PREDICATES

The following predicates are understood following the STATUS test di‐ rective:

DEFINE-MATCH variable-name

Defines the variable to "1" when the STATUS matches. A side-effect of this predicate is that this STATUS will never fail a test.

DEFINE-NO-MATCH variable-name

Defines the variable to "1" when the STATUS does not match. A side-effect of this predicate is that this STATUS will never fail a test.

IF-DEFINED variable-name

Makes the STATUS apply only if the specified variable is defined.

IF-NOT-DEFINED variable-name

Makes the STATUS apply only if the specified variable is not de‐ fined.

REPEAT-LIMIT number

Specifies the maximum number of times to repeat. The default value is 1000.

REPEAT-MATCH

REPEAT-NO-MATCH

Specifies that the current test should be repeated when the re‐ sponse status-code matches or does not match the value specified by the STATUS directive.

OPERATION CODES

Operation codes correspond to the hexadecimal numbers (0xHHHH) and names from RFC 8011 and other IPP extension specifications. Here is a complete list of names supported by ipptool(8):

    Activate-Printer

    CUPS-Accept-Jobs

    CUPS-Add-Modify-Class

    CUPS-Add-Modify-Printer

    CUPS-Authenticate-Job

    CUPS-Delete-Class

    CUPS-Delete-Printer

    CUPS-Get-Classes

    CUPS-Get-Default

    CUPS-Get-Devices

    CUPS-Get-Document

    CUPS-Get-PPD

    CUPS-Get-PPDs

    CUPS-Get-Printers

    CUPS-Move-Job

    CUPS-Reject-Jobs

    CUPS-Set-Default

    Cancel-Current-Job

    Cancel-Job

    Cancel-Jobs

    Cancel-My-Jobs

    Cancel-Subscription

    Close-Job

    Create-Job

    Create-Job-Subscriptions

    Create-Printer-Subscriptions

    Deactivate-Printer

    Disable-Printer

    Enable-Printer

resolution

textWithLanguage

textWithoutLanguage

unknown

unsupported

uri

uriScheme

VARIABLES

The ipptool(8) program maintains a list of variables that can be used in any literal string or attribute value by specifying "$variable-name". Aside from variables defined using the -d option or DEFINE di? rective, the following pre-defined variables are available:

$$ Inserts a single "$" character.

$ENV[name]

Inserts the value of the named environment variable, or an empty string if the environment variable is not defined.

$date-current

Inserts the current date and time using the ISO-8601 format ("yyyy-mm-ddThh:mm:ssZ").

$date-start

Inserts the starting date and time using the ISO-8601 format ("yyyy-mm-ddThh:mm:ssZ").

$filename

Inserts the filename provided to ipptool(8) with the -f option.

$filetype

Inserts the MIME media type for the filename provided to ipp? tool(8) with the -f option.

$hostname

Inserts the hostname from the URI provided to ipptool(8).

$job-id

Inserts the last "job-id" attribute value returned in a test re? sponse or 0 if no "job-id" attribute has been seen.

$job-uri

Inserts the last "job-uri" attribute value returned in a test re? sponse or an empty string if no "job-uri" attribute has been seen.

$notify-subscription-id

Inserts the last "notify-subscription-id" attribute value returned in a test response or 0 if no "notify-subscription-id" attribute

has been seen.

$port

Inserts the port number from the URI provided to ipptool(8).

$resource

Inserts the resource path from the URI provided to ipptool(8).

$scheme

Inserts the scheme from the URI provided to ipptool(8).

$uri Inserts the URI provided to ipptool(8).

$uriuser

Inserts the username from the URI provided to ipptool(8), if any.

$user

Inserts the current user's login name.
