Rocky Enterprise Linux 9.2 Manual Pages on command 'iw.8'

$ man iw.8

IW(8)   Linux   IW(8)

NAME

    iw - show / manipulate wireless devices and their configuration

SYNOPSIS

    iw [OPTIONS] { help [command] | OBJECT COMMAND }

    OBJECT := { dev | phy | reg }

    OPTIONS := { --version | --debug }

OPTIONS

    --version

        print version information and exit.

    --debug

        enable netlink message debugging.

IW - COMMAND SYNTAX

  OBJECT

    dev <interface name>

        - network interface.

    phy <phy name>

        - wireless hardware device (by name).

phy#<phy index>

    - wireless hardware device (by index).

reg   - regulatory agent.

COMMAND

Specifies the action to perform on the object. The set of possible ac?

tions depends on the object type. iw help will print all supported

commands, while iw help command will print the help for all matching

commands.
