Rocky Enterprise Linux 9.2 Manual Pages on command 'manconv.1'

$ man manconv.1

MANCONV(1)   Manual pager utils   MANCONV(1)

NAME

    manconv - convert manual page from one encoding to another

SYNOPSIS

    manconv -f [from-code[:from-code...]] -t to-code [-dqhV] [filename]

DESCRIPTION

    manconv converts a manual page from one encoding to another, like

    iconv. Unlike iconv, it can try multiple possible input encodings in

    sequence.   This is useful for manual pages installed in directories

    without an explicit encoding declaration, since they may be in UTF-8 or

    in a legacy character set.

    If an encoding declaration is found on the first line of the manual

    page, that declaration overrides any input encodings specified on man?

    conv's command line. Encoding declarations have the following form:

        '\" -*- coding: UTF-8 -*-

    or (if manual page preprocessors are also to be declared):

        '\" t -*- coding: ISO-8859-1 -*-

OPTIONS

-f encodings, --from-code encodings

    Try each of encodings (a colon-separated list) in sequence as

    the input encoding. The default is to guess likely input encod?

    ings based on the file name.

-t encoding, --to-code encoding

    Convert the manual page to encoding.

-q, --quiet

    Do not issue error messages when the page cannot be converted.

-d, --debug

    Print debugging information.

-h, --help

    Print a help message and exit.

-V, --version

    Display version information.
