Rocky Enterprise Linux 9.2 Manual Pages on command 'msgcmp.1'

$ man msgcmp.1

MSGCMP(1)   User Commands   MSGCMP(1)

NAME

    msgcmp - compare message catalog and template

SYNOPSIS

    msgcmp [OPTION] def.po ref.pot

DESCRIPTION

    Compare two Uniforum style .po files to check that both contain the

    same set of msgid strings. The def.po file is an existing PO file with

    the translations.   The ref.pot file is the last created PO file, or a

    PO Template file (generally created by xgettext). This is useful for

    checking that you have translated each and every message in your pro?

    gram. Where an exact match cannot be found, fuzzy matching is used to

    produce better diagnostics.

    Mandatory arguments to long options are mandatory for short options

    too.

  Input file location:

    def.po translations

    ref.pot

references to the sources

  -D, --directory=DIRECTORY

      add DIRECTORY to list for input files search

Operation modifiers:

  -m, --multi-domain

      apply ref.pot to each of the domains in def.po

  -N, --no-fuzzy-matching

      do not use fuzzy matching

  --use-fuzzy

      consider fuzzy entries

  --use-untranslated

      consider untranslated entries

Input file syntax:

  -P, --properties-input

      input files are in Java .properties syntax

  --stringtable-input

      input files are in NeXTstep/GNUstep .strings syntax

Informative output:

  -h, --help

      display this help and exit

  -V, --version

      output version information and exit
