Rocky Enterprise Linux 9.2 Manual Pages on command 'pasuspender.1'

$ man pasuspender.1

pasuspender(1)   General Commands Manual   pasuspender(1)

NAME

    pasuspender - Temporarily suspend PulseAudio

SYNOPSIS

    pasuspender [options] -- PROGRAM [ARGUMENTS ...]

    pasuspender --help

    pasuspender --version

DESCRIPTION

    pasuspender is a tool that can be used to tell a local PulseAudio sound

    server to temporarily suspend access to the audio devices, to allow

    other applications access them directly. pasuspender will suspend ac‐

    cess to the audio devices, fork a child process, and when the child

    process terminates, resume access again.

    Make sure to include -- in your pasuspender command line before passing

    the subprocess command line (as shown above). Otherwise pasuspender it‐

    self might end up interpreting the command line switches and options

    you intended to pass to the subprocess.

OPTIONS

-h | --help

    Show help.

--version

    Show version information.

-s | --server=SERVER

    Specify the sound server to connect to.
