$ man plymouth.1

PLYMOUTH(1)   User Commands   PLYMOUTH(1)

NAME

    plymouth - Send commands to plymouthd

SYNOPSIS

    plymouth [OPTION...]

    plymouth COMMAND [OPTION...]

DESCRIPTION

    The plymouth sends commands to a running plymouthd. This is used during

    the boot process to control the display of the graphical boot splash.

OPTIONS

    The following options are understood. These options are supported for

    compatibility with the old rhgb-client interface, and have been

    replaced by the commands that are described in the next section.

    --help

      Show summary of options.

    --debug

      Enable verbose debug logging.

    --get-splash-plugin-path

Get directory where splash plugins are installed.

--newroot=[STRING]

Tell plymouthd that the new root filesystem is mounted.

--quit

Tell plymouthd to quit.

--ping

Check if plymouthd is running.

--has-active-vt

Check if plymouthd has an active vt.

--sysinit

Tell plymouthd root filesystem is mounted read-write.

--show-splash

Show the splash screen.

--hide-splash

Hide the splash screen.

--ask-for-password

Ask the user for a password.

--ignore-keystroke=[STRING]

Remove sensitivity to a keystroke.

--update=[STRING]

Tell plymouthd an update about boot progress.

--details

Tell plymouthd there were errors during boot.

--wait

Wait for plymouthd to quit.

COMMANDS

The following commands are understood:

change-mode OPTION

Change the operation mode.

--boot-up

Start the system up

--shutdown

Shutting the system up

--updates

    Applying updates

system-update OPTION
