PTHREAD_MUTEXATTR_GETPSHARELinux Programmer's MPTHREAD_MUTEXATTR_GETPSHARED(3)

NAME

    pthread_mutexattr_getpshared, pthread_mutexattr_setpshared - get/set

    process-shared mutex attribute

SYNOPSIS

    #include <pthread.h>

    int pthread_mutexattr_getpshared(const pthread_mutexattr_t *attr,

                     int *pshared);

    int pthread_mutexattr_setpshared(pthread_mutexattr_t *attr,

                     int pshared);

    Compile and link with -pthread.

DESCRIPTION

    These functions get and set the process-shared attribute in a mutex at‐

    tributes object.   This attribute must be appropriately set to ensure

    correct, efficient operation of a mutex created using this attributes

    object.

    The process-shared attribute can have one of the following values:

    PTHREAD_PROCESS_PRIVATE

Mutexes created with this attributes object are to be shared only among threads in the same process that initialized the mu?tex. This is the default value for the process-shared mutex at?tribute.

PTHREAD_PROCESS_SHARED

Mutexes created with this attributes object can be shared be?tween any threads that have access to the memory containing the object, including threads in different processes.

pthread_mutexattr_getpshared() places the value of the process-shared attribute of the mutex attributes object referred to by attr in the lo?cation pointed to by pshared.

pthread_mutexattr_setpshared() sets the value of the process-shared at?tribute of the mutex attributes object referred to by attr to the value specified in pshared.

If attr does not refer to an initialized mutex attributes object, the behavior is undefined.

RETURN VALUE

On success, these functions return 0. On error, they return a positive error number.

ERRORS

pthread_mutexattr_setpshared() can fail with the following errors:

EINVAL The value specified in pshared is invalid.

ENOTSUP

pshared is PTHREAD_PROCESS_SHARED but the implementation does not support process-shared mutexes.

CONFORMING TO

POSIX.1-2001, POSIX.1-2008.
