Rocky Enterprise Linux 9.2 Manual Pages on command 'rev.1'

$ man rev.1

REV(1)	User Commands	REV(1)

NAME

   rev - reverse lines characterwise

SYNOPSIS

   rev [option] [file...]

DESCRIPTION

   The rev utility copies the specified files to standard output,

   reversing the order of characters in every line. If no files are

   specified, standard input is read.

   This utility is a line-oriented tool and it uses in-memory allocated

   buffer for a whole wide-char line. If the input file is huge and

   without line breaks than allocate the memory for the file may be

   unsuccessful.

OPTIONS

   -V, --version

      Display version information and exit.

   -h, --help

      Display help text and exit.

SEE ALSO
