Rocky Enterprise Linux 9.2 Manual Pages on command 'scsi_satl.8'

$ man scsi_satl.8

SCSI_SATL(8)   SG3_UTILS   SCSI_SATL(8)

NAME

    scsi_satl - check SCSI to ATA Translation (SAT) device support

SYNOPSIS

    scsi_satl [--help] [--log] [--quiet] [--verbose] DEVICE

DESCRIPTION

    This bash shell script calls several SCSI commands on the given DEVICE

    that is assumed to be an ATA device behind a SCSI to ATA Translation

    (SAT) layer (SATL). The results of each test and a pass/fail count are

    output.

OPTIONS

    Arguments to long options are mandatory for short options as well.

    -h, --help

        print out the usage message then exit.

    -L, --log

        the output to stderr (from each SCSI command executed) is ap‐

        pended to a file called 'scsi_satl.err' in the current working

        directory.

-q, --quiet

    the amount of output is reduced and typically only the pass/fail

    count is output.

-v, --verbose

    increase level or verbosity.

EXIT STATUS

The exit status of this script is the number of "bad" errors found. So

an exit status of 0 means all mandatory SCSI commands worked as ex?

pected.
