

Remove all local customizations of permissive domains

-l, --list

List records of the specified object type

-E, --extract

Extract customizable commands, for use within a transaction

-n, --noheading

Do not print heading when listing the specified object type

-N, --noreload

Do not reload the policy after commit

-S STORE, --store STORE

Select an alternate SELinux Policy Store to manage

## EXAMPLE

List all permissive modules

```
# semanage permissive -l
```

Make httpd\_t (Web Server) a permissive domain

```
# semanage permissive -a httpd_t
```

## SEE ALSO

selinux(8), semanage(8)
