Rocky Enterprise Linux 9.2 Manual Pages on command 'service_seusers.5'

$ man service_seusers.5

service_seusers(5)   SELinux configuration   service_seusers(5)

NAME

    service_seusers - The SELinux GNU/Linux user and service to SELinux

    user mapping configuration files

DESCRIPTION

    These are optional files that allow services to define an SELinux user

    when authenticating via SELinux-aware login applications such as

    PAM(8).

    There is one file for each GNU/Linux user name that will be required to

    run a service with a specific SELinux user name.

    The path for each configuration file is formed by the path returned by

    selinux_policy_root(3) with /logins/username appended (where username

    is a file representing the GNU/Linux user name). The default services

    directory is located at:

/etc/selinux/{SELINUXTYPE}/logins

Where {SELINUXTYPE} is the entry from the selinux configuration file
config (see selinux_config(5)).

getseuser(3) reads this file to map services to an SELinux user.

FILE FORMAT

Each line within the username file is formatted as follows with each
component separated by a colon:

service:seuser[:range]

Where:

service

The service name used by the application.

seuser

The SELinux user name.

range

The range for MCS/MLS policies.

EXAMPLES

Example 1 - for the 'root' user:

./logins/root

ipa:user_u:s0

this_service:unconfined_u:s0

Example 2 - for GNU/Linux user 'rch':

./logins/rch

ipa:unconfined_u:s0

that_service:unconfined_u:s0
