Rocky Enterprise Linux 9.2 Manual Pages on command 'sestatus.8'

$ man sestatus.8

sestatus(8)   SELinux command line documentation   sestatus(8)

NAME

   sestatus - SELinux status tool

SYNOPSIS

   sestatus [-v] [-b]

   This tool is used to get the status of a system running SELinux.

DESCRIPTION

   This manual page describes the sestatus program.

   This tool is used to get the status of a system running SELinux. It

   displays data about whether SELinux is enabled or disabled, location of

   key directories, and the loaded policy with its status as shown in the

   example:

       > sestatus

       SELinux status: enabled

       SELinuxfs mount: /selinux

       SELinux root directory: /etc/selinux

       Loaded policy name: targeted

       Current mode: permissive

Mode from config file: enforcing

Policy MLS status: enabled

Policy deny_unknown status: allow

Memory protection checking: actual (secure)

Max kernel policy version: 26

sestatus can also be used to display:

- The security context of files and processes listed in the

  /etc/sestatus.conf file. The format of this file is de?

  scribed in sestatus.conf(5).

- The status of booleans.

OPTIONS

-v

Displays the contexts of files and processes listed in the

/etc/sestatus.conf file. It also checks whether the file is a

symbolic link, if so then the context of the target file is also

shown.

The following contexts will always be displayed:

        The current process context

        The init process context

        The controlling terminal file context

-b

Display the current state of booleans.

FILES

/etc/sestatus.conf

AUTHOR
