Rocky Enterprise Linux 9.2 Manual Pages on command 'sha224sum.1'

\$ man sha224sum.1

SHA224SUM(1) User Commands SHA224SUM(1)

NAME

sha224sum - compute and check SHA224 message digest

SYNOPSIS

sha224sum [OPTION]... [FILE]...

DESCRIPTION

Print or check SHA224 (224-bit) checksums.

With no FILE, or when FILE is -, read standard input.

-b, --binary

read in binary mode

-c, --check

read SHA224 sums from the FILEs and check them

--tag create a BSD-style checksum

-t, --text

read in text mode (default)

-z, --zero

end each output line with NUL, not newline, and disable file

name escaping

The following five options are useful only when verifying checksums:

`--ignore-missing`

don't fail or report status for missing files

`--quiet`

don't print OK for each successfully verified file

`--status`

don't output anything, status code shows success

`--strict`

exit non-zero for improperly formatted checksum lines

`-w, --warn`

warn about improperly formatted checksum lines

`--help` display this help and exit

`--version`

output version information and exit

The sums are computed as described in RFC 3874. When checking, the in?

put should be a former output of this program. The default mode is to

print a line with checksum, a space, a character indicating input mode

('*' for binary, ' ' for text or where binary is insignificant), and

name for each FILE.

Note: There is no difference between binary mode and text mode on GNU

systems.
