Rocky Enterprise Linux 9.2 Manual Pages on command 'simc_Ismplugin.1'

\$ man simc_Ismplugin.1

simc_Ismplugin(1) libStorageMgmt simc_Ismplugin(1)

NAME

simc_Ismplugin -- LibstorageMgmt Simulator C Plugin

DESCRIPTION

LibStorageMgmt simulator C plugin is for development use. The plugin simulates an array which supports most features of the library. The simulator is memory based, state will be discarded once the plugin exits. The 'simc_Ismplugin' executable file is for the libStorageMgmt daemon to execute when client user specifies simc plugin in the URI. Since every command of lsmcli is a standalone libStorageMgmt session, this plugin is essentially useless for this purpose. In this use case, the libStorageMgmt simulator plugin sim_Ismplugin(1) is suggested. This plugin is written in pure C and is intended to be an example of a C plugin for the library.

URI

To use this plugin, users should set their URI to this format:

simc://

No password is required for this plugin. No URI parameters are supported.

ported by this plugin.

FIREWALL RULES

This plugin requires not network access.
