***\$ man tss2\_getplatformcertificates.1***

tss2\_getplatformcertificatesGeneral Commands Matss2\_getplatformcertificates(1)

NAME

tss2\_getplatformcertificates(1) -

SYNOPSIS

tss2\_getplatformcertificates [OPTIONS]

SEE ALSO

fapi-config(5) to adjust Fapi parameters like the used cryptographic profile and TCTI or directories for the Fapi metadata storages.

fapi-profile(5) to determine the cryptographic algorithms and parame?

ters for all keys and operations of a specific TPM interaction like the

name hash algorithm, the asymmetric signature algorithm, scheme and pa?

rameters and PCR bank selection.

DESCRIPTION

tss2\_getplatformcertificates(1) - This command returns the set of plat?

form certificates concatenated in a continuous buffer if the platform

provides platform certificates. Platform certificates for TPM 2.0 can

consist not only of a single certificate but also a series of so-called

delta certificates.

## OPTIONS

These are the available options:

? -f, --force:

Force overwriting the output file.

? -o, --certificates=FILENAME or - (for stdout):

Returns a continuous buffer containing the concatenated platform certificates.

## COMMON OPTIONS

This collection of options are common to all tss2 programs and provide information that many users may expect.

? -h, --help [man|no-man]: Display the tools manpage. By default, it attempts to invoke the manpager for the tool, however, on failure will output a short tool summary. This is the same behavior if the ?man? option argument is specified, however if explicit ?man? is requested, the tool will provide errors from man on stderr. If the ?no-man? option is specified, or the manpager fails, the short options will be output to stdout.

To successfully use the manpages feature requires the manpages to be installed or on MANPATH, See man(1) for more details.

? -v, --version: Display version information for this tool, supported tctis and exit.

## EXAMPLE

```
tss2_getplatformcertificates --certificates=certificates.file
```

## RETURNS

0 on success or 1 on failure.

## BUGS

Github Issues (<https://github.com/tpm2-software/tpm2-tools/issues>)

## HELP

See the Mailing List (<https://lists.01.org/mailman/listinfo/tpm2>)
